SUMMARY

Technical Product Engineer with 4+ years of experience turning ambiguous ideas into AI- and cloud-powered products, prototypes, APIs, analytics, and SaaS workflows. Experienced in product requirements, rapid prototyping, stakeholder collaboration, Agile delivery, and using product data to drive measurable business outcomes. Strong technical foundation in TypeScript, Python, React, Node.js, GCP, SQL, APIs, and LLM integrations.

TECHNICAL SKILLS

Product & Delivery: Product Requirements, Agile/Scrum, JIRA, Stakeholder Communication, Product Analytics, Rapid Prototyping, AI Workflow Automation
AI, Cloud & Data: GCP, Cloud Run, Firebase, Supabase, BigQuery, AWS, RAG, LLM APIs, Voice AI, SQL, Power BI, Claude, Cursor, Grok Bot
Engineering: TypeScript, JavaScript, Python, C#, Java, React, Next.js, Node.js, REST APIs, Webhooks, Docker, Git

EDUCATION

Master of Science, Computer Science **May 2028**
GEORGIA INSTITUTE OF TECHNOLOGY

Bachelor of Science, Business & Information Systems **May 2025**
NEW JERSEY INSTITUTE OF TECHNOLOGY

EXPERIENCE

VERA **Feb 2026 - Present**
Founding Engineer

- Built an AI voice platform for caregiver support: scheduled check-in calls to care recipients, call summaries for caregivers, and agency outreach workflows for caregivers awaiting government services.
- Owned the product from prototype to a production caregiver wellness platform with a projected $1M ARR, setting roadmap, scope, and launch priorities against technical and business constraints.
- Presented weekly shareholder updates on growth, conversion, call quality, and risk, turning metrics into product priorities.
- Defined and shipped the core caregiver journey: signup, client onboarding, phone verification and consent, scheduled check-ins, post-call summaries, Shopify billing, and family sharing.
- Designed the production conversational voice agent (Pipecat, Gemini Live, Twilio), including barge-in, voicemail handling, multilingual calls, Voice ID, consent, and wrong-person privacy hangups.
- Built AWS infrastructure (EC2, S3, Cognito, Terraform), CI/CD, PR previews, evals, synthetic canaries, and a stakeholder metrics dashboard to support reliable releases and data-driven decisions.

VERIZON **Jun 2024 - Feb 2026**
Co-op → Product Engineer (Full-Time)

- Translated ambiguous AI and cloud product concepts into stakeholder-ready prototypes, helping advance 3 ideas into product-ready leadership proposals.
- Built a platform-agnostic sandbox for rapid prototyping and cross-platform testing, reducing development costs by 90% versus outsourced development and increasing product approval rates by 60% versus Google Slides-based reviews by bringing prototype development in-house
- Built AI-powered prototypes spanning AI assistants, cloud storage, home networking, identity protection, and Verizon Home using React, TypeScript, Firebase, Node.js, Java, Python, GCP, and REST APIs, which secured stakeholder approval and guided the product roadmap
- Developed an AI-integrated Android application mirroring Verizon Home workflows, earning the Verizon Spotlight Award for innovation and user impact.
- Built an authenticated RAG-powered document search using Node.js, Firebase, and JWT, improving internal document discovery speed and accuracy.

PROJECTS

Property Core Github **Oct 2026**

- Bring-Your-Own AI Workflow Automation for Short-Term Rental Hosts
- Building and piloting an AI operations platform with several Airbnb hosts on live properties; gathering host pain points and use cases to guide product priorities.
- Built TypeScript/Node.js tools exposed through MCP for AI agents, connecting booking calendars, cleaner messaging, and supply workflows with approval rules, spending limits, and audit records.

AI SaaS Platform for SMB Workflow Automation https://khanex.ai **Aug 2025 - Feb 2026**

KHANEX

- Owned development of a multi-tenant B2B AI SaaS product, translating SMB workflow needs into AI-powered ordering, analytics, and automation features.
- Shipped workflow automation that reduced customer operating costs by an average of $500/month, using product usage and operational data to guide improvements.
- Developed REST APIs and webhook pipelines integrating ElevenLabs voice agents with Clover, Toast, and Square POS systems for voice-initiated order processing.
- Built real-time analytics dashboards with BigQuery, Recharts, and Cloud Run ingestion pipelines to surface usage patterns and business insights.
- Published the public website: https://khanex.ai

Data Science Research Project Github **Feb 2024 - Apr 2024**

Pakistan Pandemic Response Analysis

- Published a data science research project through Columbia University's CIC Student Working Group analyzing Pakistan's COVID-19 policy response, vaccination rollout, and public health intervention effectiveness.
- Cleaned and analyzed public health datasets using Python, Pandas, and Matplotlib, then applied ARIMA/ARIMAX forecasting models to evaluate pandemic trends and policy impact.
- Delivered a written research paper and interactive Colab notebook with visualizations translating statistical findings into policy-focused insights.
